🗨 SUMMARY

Motivated software engineering student with a keen passion for AI, and strong experience in deep learning, Computer vision, and image processing. Well-versed in software engineering principles with hands-on experience in developing robust software solutions. Experienced in object-oriented programming (OOP), Data structure and version control systems(GitHub) and used many frameworks. Skilled in utilizing languages such as Python, Java, C, HTML, CSS, JavaScript, PHP and SQL.

🎓 EDUCATION

Bachelor of computer science (software engineering) with honor

2021 – 2025

Universiti Malaysia Pahang Al-sultan Abdullah, Pekan, Pahang, Malaysia

CGPA: 3.3/4.00

🔗 ACADEMIC PROJECTS

Final Year Project (Driver Sleep Detection Using Machine Learning):

present

- Identify suitable machine learning or computer vision techniques for detecting drowsiness using Python.
- Apply machine learning or computer vision techniques that accurately detect drowsiness in drivers.

Software Evolution & Maintenance (Online Marriage Registration Platform):

Nov 2023 – Jan 2023

- Utilized GitHub and Laravel for development.
- Evolved existing systems to online platform with HTML, CSS, JavaScript, PHP, MySQL integration.

WEB Engineering Project (Knowledge-sharing Platform):

May 2023 – Jul 2023

- Developed using HTML, CSS, JavaScript, PHP, SQL.
- Facilitates information exchange within academic community with Bootstrap and Visual Studio Code integration.

AI Project (Fuzzy Logic System for Airline Delay Analysis):

Apr 2023 – May 2023

- Utilized Python, NumPy, SciPy, and sci-kit-fuzzy framework.
- Developed Fuzzy Logic System focusing on weather impacts on flight operations.

OOP Project (Hotel Management System):

Jan 2023 – Feb 2023

- Developed in Java using NetBeans IDE.
- Automates hotel operations (room bookings, guest management) showcasing Object-Oriented Programming principles.

Data Structure & Algorithm Project:

May 2022 – Jun 2022

- Implemented in C within Code::Blocks environment.
- Demonstrates proficiency in fundamental data structures (Stacks, Queues) and algorithms (Bubble Sort, Linear Sequential Search).

</> TECHNICAL SKILLS

- **Programming Language:** Python, JAVA, C, HTML, CSS, JavaScript, PHP and SQL.
- **Frameworks and Libraries:** TensorFlow, PyTorch, and OpenCV.
- **Development Tools and Environments:** Jupyter Notebook/Google Colab, Visual Studio Code, CodeBlock, NetBeans, GitHub, and MySQL.
- **Software Engineering:** Data Structures and Algorithms, OOP, AI, Machine Learning, Computer Vision, image processing .react.js and laravel.

🧠 SOFT SKILLS

Problem-Solving	- Attention to Details
Leadership	- Harworkerd
Teamwork	- Time Management

🌐 LANGUAGES

Arabic

English

📜 CERTIFICATES

- HUAWEI HCIA-AI V3.0
- Google Cloud Skills Boost
- DevTown bootcamp Backend web development
